APRIL 2011

INTRODUCTION TO ALL CUSTOMERS: TO WHOM IT MAY CONCERN:

We at Auto Electrical Boffins cc (AEB) would like to introduce ourselves to your company. We have supplied the trade with L.E.D. truck and trailer tail lights since 2004. Our main concern on the road is the visibility and safety of heavy truck and trailers at all times.

We started manufacturing a tail light which can withstand the harsh conditions on the road. For that we manufactured a light not using the old type L.E.D, rather we use a flat mounted light emitting diode together with a computerised chip, which we program with different functions to assist the vehicle to be more visible on the road.

The brake light for instance are programmed with a brake light warning system whereby when the driver applies brakes, the brake light will flash three times before being permanently on. That will draw the attention of the driver behind to be more alert of conditions in front of him. With these settings it was found that the reaction time of the driver following were quicker than normal and the possibility of a serious accident were reduced.

We programmed a flicker function on the amber tail light as well, where it can be used on vehicles without a flasher unit. We even programmed a fast strobe like function on request where the amber light can be used on construction sites as a warning / danger beacon. All products are available on our website. Our products complies to the SABS regulations.

Our tail lights are available via Route Management (Pty)S (Henred Fruehauf Trailers Spares) as well as from Robert Bosch (Pty) Proprietary (Diesel Electric Branches).

Our assistance is available at all times. If a problem has not been resolved to your satisfaction please feel free to contact us in this regard.

Kind regards

Management
